

WE PROVIDE AN EXTENSIVE PORTFOLIO FOR INDUSTRIAL AUTOMATION AND INDUSTRY 4.0

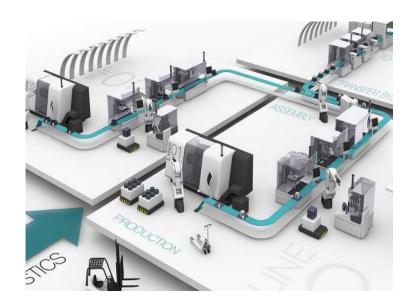

CUSTOMER NEEDS IN MODERN PRODUCTION CONCEPTS

Requirements for tomorrow's efficient production

- More and more extremely flexible production lines
- Demand for maximized uptime, minimized downtime
- Real time status information of machines and products
- Smart maintenance and upgrading based on "real" facts
- Ready for the future:
 Self-regulating systems and intelligent control mechanisms – Cyber Physical Systems (CPS)

Balluff GmbH, Produktmanagement, S. Hornung

MULTIPLE TARGET PERSONAS WITH DIFFERENT NEEDS

Needs:

Maintenance Engineer

Design Engineer

Needs:

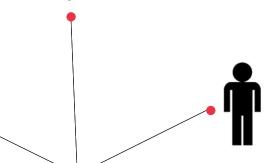

- Standardized components
- Reliable standard solutions
- Easy and reliable start-up
- Suitable cost-performance ratio

Ť

Easy component exchange

User friendly installation

Planable maintenanceVisualization of status

Production Manager

Needs:

- Just-in-time production
- Minimized rejects
- Easy product changeover
- High line uptime
- Visualization of plant status

Quality Assurance

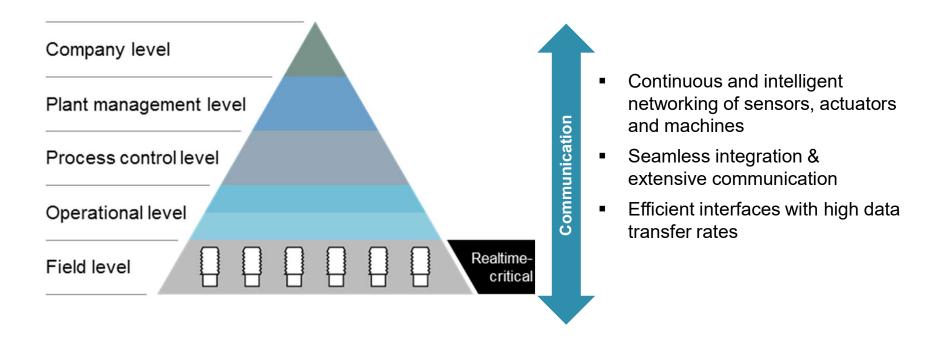

Needs:

- Reliable rejects detection
- High Quality level
- Self-adjusting production
- In process quality control

innovating automation

Balluff GmbH, Produktmanagement, S. Hornung

INCREASING NEED FOR INFORMATION BETWEEN LEVELS

BYLLUFF

ON-SITE INFORMATION IS THE KEY TO EFFICIENCY

Company level

Plant management level

Process control level

Operational level

Field level

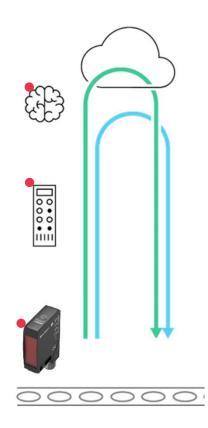

Realtime-critical

- Sensors are "Eyes and ears" in the plant and provide valuable data
- Numerous sensors are already in place and are necessary for the control systems
- Without on-site data no reliable information is available
- Primary and secondary data:
 - Object data
 - Identifiction data
 - Environmental data
 - Diagnostic status
 - Sensor status info
 - Pre-processed data

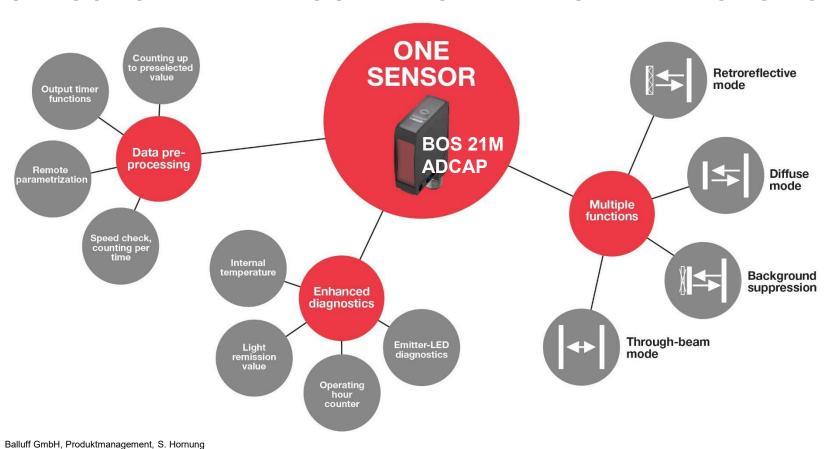

Balluff GmbH, Produktmanagement, S. Hornung

INTELLIGENT SENSORS ARE THE FIRST STEP

- Enriching digital plant models with real life data
- Increasing knowledge of plant status and production
- Providing data beyond the standard sensor function
- Enabling Condition Monitoring and Predictive maintenance with extra data (e.g. lifetime, stresslevel, misalignment)
- Monitoring environmental conditions (e.g. temperature, voltage supply, contamination)
- Remote Parametrization for rapid production changes

SENSORS ARE ALL-ROUNDERS WITH MULTIPLE FUNCTIONS

INNOVATIVE SENSORS - MORE THAN JUST SIGNALS!

- On the fly changeable sensing modes ensure reliable detection of various objects with best sensing principle
- Decentralized sensor intelligence and data pre-processing enables fast processes independent of IO-Link data speed
- Advanced emitter-LED diagnostics and further diagnostic functions are the base for predictive maintenance based on real-life data.
- Extra condition monitoring functions provide further benefits by increasing knowledge about plant and sensor status

Balluff GmbH, Produktmanagement, S. Hornung

BOS 21M ADCAP – CLEVER AND FLEXIBLE WITH IO-LINK

Intelligent incremental encoder

Multicolor-Status-LED

Sensor Stresslevel

Monitoring of Emitter-LED

Counting & Data pre-processing

Four photoelectric sensor principles

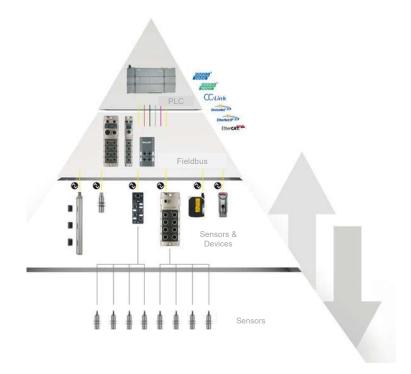

Light remission value & smart diagnostics

Provision of data via IO-Link

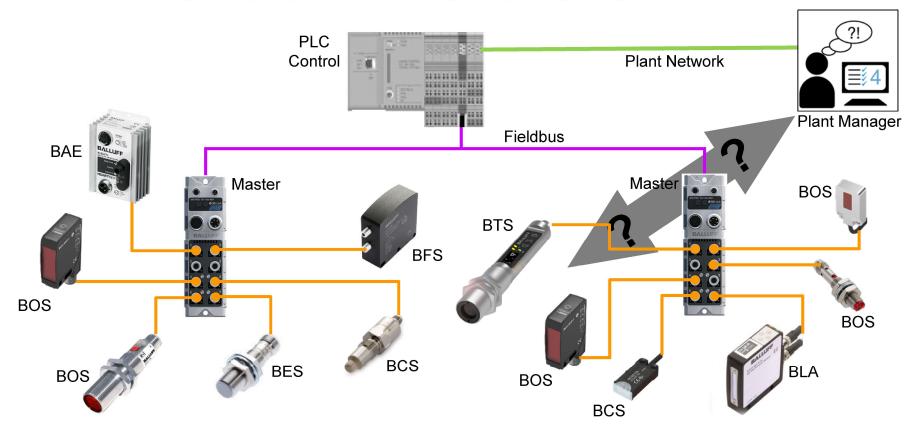

INTELLIGENT SENSORS DO NEED NETWORKS

- Providing bandwidth for transporting data (not signals)
- Connection between sensors and plant management
- Data are collected and transferred simultaneously
- Fast and standardized data exchange
- Data and Information are available to all users
- Reduction of wiring and easy installation

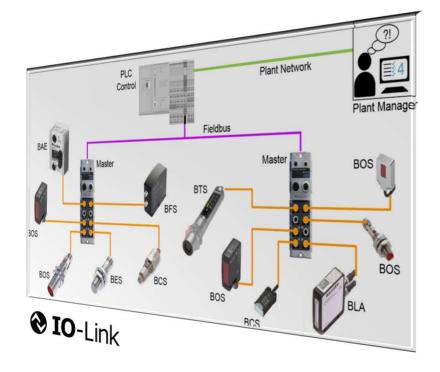

NETWORKS BRIDGE THE INFORMATION GAP

IO-LINK IS THE COMMUNICATION CHANNEL FOR SENSORS

- Standard components with known and reliable technology
- Wide range of sensors, devices and gateways available
- No proprietary system widely used around the globe
- Standardized protocols and sensor profiles for easy integration and system set-up
- Easy combination with other fieldbus systems (Profibus, Ethernet, CC-Link, etc.)

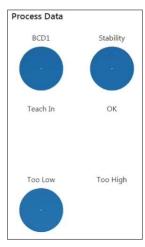

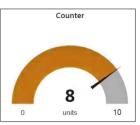

Balluff GmbH, Produktmanagement, S. Hornung

EASY I4.0 AND IOT WITH IO-LINK

- IO-Link provides a direct connection from the IT systems to the sensors
- IO-Link enables the worldwide access to on-site sensor data
- IO-Link as efficient and powerful interface provides data instead of just a digital signal
- IO-Link is <u>one</u> interface for <u>all</u> signals: direct access to process and service data

BVLL012

BALLUFF A GLOBAL PROMISE

innovating automation
